

Peter Shannon

At Radius Capital, Peter Shannon invests in next-generation transportation technologies and supporting systems, with a focus on advanced aerial mobility. Peter has experience in software, venture capital, and transportation technology investing. His investment strategy addresses how electric propulsion, autonomy, and mobility service models will expand the use cases for new forms of flight across the economy. His focus is on: the software and related scalable technologies that enable new aircraft; the systems and data that digitize the flight environment; and the software that will power application-specific end-uses. Peter is a member of NASA's Aeronautics Research Technology Roundtable, he advises members of the FAA's Integration Pilot Program for UAVs in the National Airspace, and he is a pilot.
